Task 1

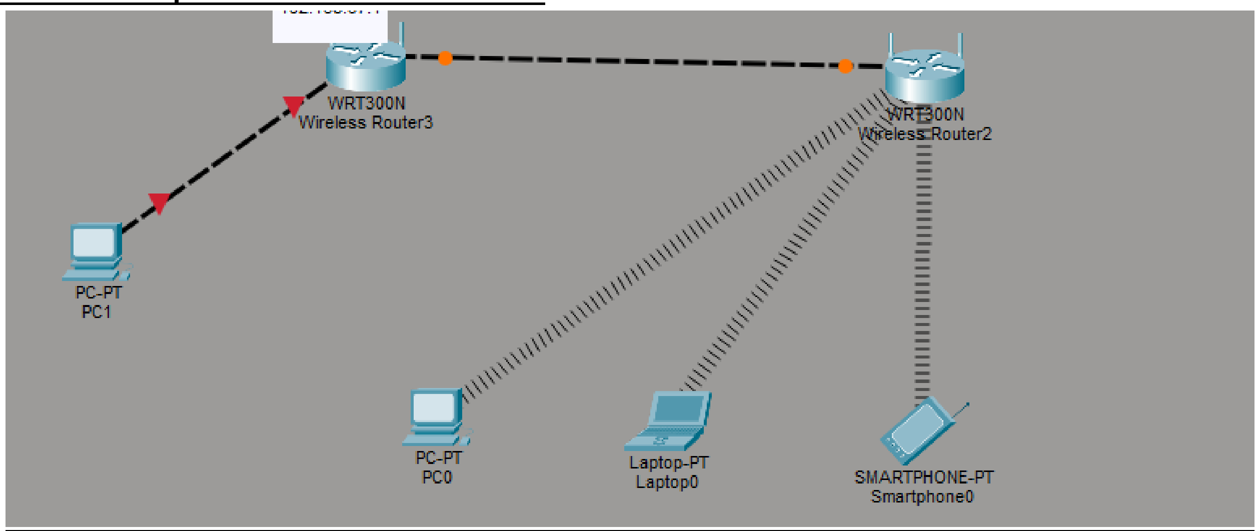
Task 01:

A family home has multiple smartphones and laptops that need secure wireless access while a desktop computer is connected via cable; DESIGN a wireless network using 2 wireless router, 3 wireless devices, and 1 wired PC, configure wireless security and IP addressing, and confirm that all devices can communicate successfully within the network

Solution:

Step 01:

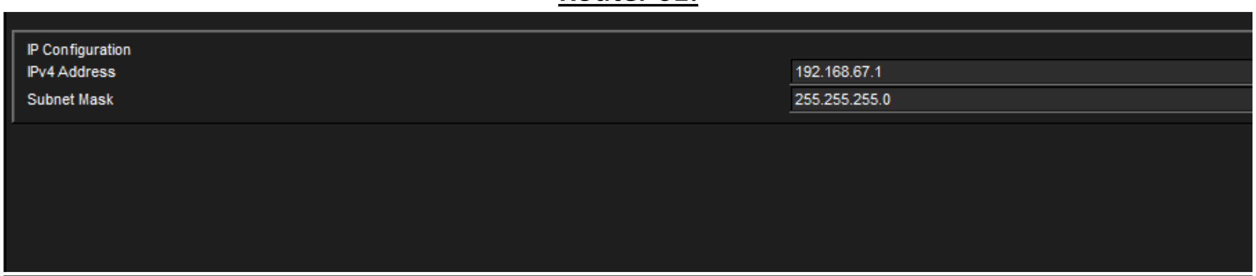
Add two wireless routers in the network and also add one switch and also add three devices three are wireless and one pcs are connected via cable:



Step 02:

Give Ip Addresses according to the instructions:

Router 01:



PC 01 connected via cable

Wireless pcs and laptops and msart phone:

Step 03:

Send messages:
