

Lab 3 AI Tasks

Q1. Write a Python program that takes a number from the user and prints its multiplication table from 1 to 10 using a for loop.

Q2. Write a Python program using a while loop to calculate and print the sum of all even numbers between 1 and 50.

Q3. Write a Python function named `find_largest(a, b, c)` that takes three numbers as input and prints the largest number among them.

Q4. Write a Python function named `calculate_area(radius)` that takes the radius of a circle as input and returns the area of the circle. Use the formula: $\text{Area} = 3.14 \times \text{radius}^2$.

Q5. Write a Python program that defines a nested function where the main function `student_report()` contains another function `grade_status(marks)`. The inner function should print "Pass" if $\text{marks} \geq 50$, otherwise print "Fail". Call the inner function from within the main function.
