

## Lab 5

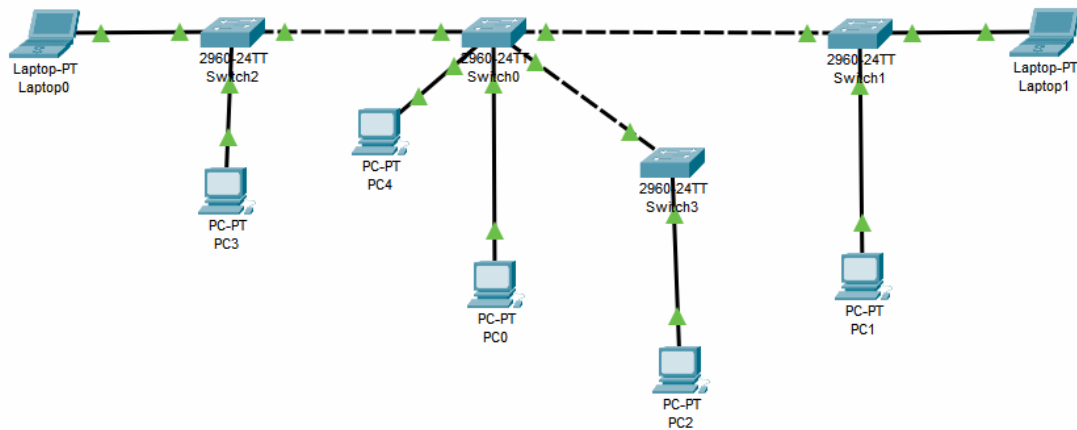

### Computer networks

#### Question 1:

Design and configure the below network in **Cisco Packet Tracer** that connects **four LANs using multiple switches**.

Assign appropriate IP addresses to each LAN, ensuring that devices within the same LAN can communicate with each other, and verify connectivity between all LANs using the **ping** command.

#### Network:

#### Instructions:

- 1- Use your reg no in Ip address as instructed in class
- 2- All Ip addresses must belong to a single subnet
- 3- Check the connectivity using the ping command for all end devices
- 4- Submit a complete lab Report.
