

Lab Assignment:7

Scenario: Cyber Incident at “TechNova College”

TechNova College has:

- 500 students
- 50 staff
- 3 computer labs
- Centralized student database
- Biometric attendance system
- Cloud-based LMS

Incident

Last week, the IT department discovered:

1. Multiple login attempts from overseas IPs.
2. Unauthorized downloads of student profiles.
3. A staff member complaining that their email is sending spam automatically.
4. Students reporting slow internet due to someone downloading movies on lab PCs.
5. Biometric logs missing for 2 days.

Tasks

- ✓ **Task 1:** Identify 5 risks from this scenario
- ✓ **Task 2:** Create a security policy
- ✓ **Task 3:** Design a 6-month awareness program
- ✓ **Task 4:** Map to ISO + NIST

Task 5 Case Studies on Legal & Ethical Dilemmas

Task 5.1

Read the below case studies:

Case Study 1 “The Exam Paper Leak Suspicion”

The IT technician finds that a faculty member’s account downloaded the final exam papers at 2:00 AM.

He suspects the account was misused, but he also knows the faculty member is well respected.

Dilemma:

Should the technician secretly investigate the faculty member’s activities, or officially report the incident immediately?

Case Study 2 “Student Data Misuse for Research”

A faculty member exports student performance data (names, grades, attendance) for "research purposes".
No formal approval or consent was taken.

Dilemma:

Is it acceptable to use private student data for academic research without authorization?

Case Study 3 “Improper System Access by IT Intern”

An IT intern accesses student email accounts “out of curiosity” and reads a few conversations.
No harm was done, but privacy was clearly violated.

Dilemma:

Should the intern be reported to management immediately, or trained privately to avoid ruining their career?

Task 5.2

For each case study, answer:

1. **Identify the ethical dilemma and conflicting values.**
2. **State the applicable legal principles** (privacy law, consent, acceptable use).
3. **Recommend the correct professional action** based on security principles.
